## What is Metcal SmartHeat® Technology?

The temperature of a Metcal SmartHeat® cartridge is fixed at the molecular level, to ensure no overheating and maximized process control.

Metcal SmartHeat® cartridges are a proprietary design consisting of a non-heating copper core and an outer heating layer of specially engineered magnetic alloy. The composition of the alloy predetermines the tip temperature.

#### Metcal SmartHeat®

- Removes temperature variability with self-regulating tip
- Ensures there is no temperature overshoot
- Removes risk of operator changing the temperature
- Guarantees soldering temperatures are within engineering specs
- Significantly reduces risk of poor solder joints

## **Advantages of SmartHeat® Fixed Temperature**

- Improves process control
- Temperature repeatability
- NO CALIBRATION. EVER.
- Extremely fast time-to-temperature and temperature recovery

# Hand Soldering, Desoldering, & Rework Systems

#### **Ultimate Performance Through Inductive Technology**

Metcal soldering systems use powerful, reliable inductive heating technology, achieving faster time-to- temperature, shorter dwell times, and faster thermal recovery than comparable resistive heating systems. What does this mean for the user? Fast, efficient soldering, even on difficult high thermal mass applications.

#### **Metcal SmartHeat®**

**Technology** maintains the exact temperature needed for each solder joint and responds by delivering the precise amount of thermal energy required to create a reliable connection.

#### Connection Validation™ (CV)

**Technology** evaluates the quality of each solder joint by calculating the intermetallic compound (IMC) formation. Closed-loop feedback is provided to the operator via the LED-equipped handpiece. CV technology marks a significant advancement in hand soldering process control.

#### **GT Series: Best-in-Class Adjustable Temperature Soldering Systems**

The GT Series is the culmination of over 35 years of work developing and refining hand soldering solutions. The GT90 & GT120 soldering systems are powered by induction, achieving the performance and versatility the industry requires, with the flexibility and control of adjustable temperature.

Connection Validation™ (CV) Soldering Systems

### CV-5210 & CV-510

#### **Connection Validation™ (CV) Series Systems**

The intermetallic compound (IMC) thickness is critical in the formation of a solder joint. Connection Validation $^{\text{TM}}$  (CV) evaluates the quality of the solder joint by calculating the IMC formation and provides closed-loop feedback to the operator.

Metcal offers two unique CV Soldering Systems. The CV-5200 Series features the patented Connection Validation™ IMC formation technology along with SmartHeat® power-on-demand technology. A 2.8"/7 cm color touchscreen with bold graphics makes programming easy. The integrated net-power meter gives a visual representation of the power-on-demand technology.

The CV-500 Series packs all the Connection Validation™ technology into a compact, economical housing. It is also ideal for SMD touchup and small component rework using the Ultrafine handpiece and Ultrafine tweezer handpiece (each sold separately).

## 15 Tips for Better Tip Care

- **1.** Do not "scrub" the lead. To maximize heat transfer, tin the tip and create a solder bridge.
- 2. Do not apply excessive pressure when soldering.
- **3.** Do not use pliers to change tip cartridges. Use a Cartridge Removal Pad.
- **4.** Do not drop or bang the tip or cartridges onto hard surfaces.
- **5.** Select the largest tip possible for the lead being soldered. Match the size of the tip to the lead as much as possible.
- **6.** Use the lowest possible temperature when soldering. Low temperatures reduce oxidation.
- **7.** Select lower-activity fluxes when possible. RMA flux is best for maximum tip life.
- 8. Keep tips tinned when in use and during storage.
- 9. Turn the system off when not in use.
- **10.** Use only clean, sulfur-free sponges for cleaning tips to prevent tip de-wetting.
- **11.** Ensure sponges are damp, not wet, with deionized water.
- **12.** Do not routinely use tip tinners, as they erode the iron plating which reduces tip life.
- 13. Use a Tip Cleaner to clean your tips regularly. Use a brass brush and brass pads to clean heavily oxidized tips.
- **14.** When it makes sense, choose a blunter tip over a sharper tip.
- **15.** Remove the cleaning sponge's plug and use the hole to collect the dross away from the sponge surface. Use the sponge slot only after removing the dross, to avoid contamination.

## The MX-5200 Soldering, Desoldering, & Rework Series

#### For two users or a single user with dual

**applications.** The MX-5200 can be operated with two handpieces dynamically sharing the 80 watts output power based on demand, adding even more application flexibility and speed.

**Fast time-to-recovery.** Delivers increased production rates and throughput no matter the application. The challenges of high-mass components, multilayered boards, and

lead-free solders are seamlessly tackled by the MX-5200 supercharged power supply.

#### SmartHeat® process

control. The technology built into every Metcal system means soldering and rework are always performed at safe, controlled temperatures. Metcal users know moderate fixed temperatures, where power is varied, provide the best assurance for a well-controlled soldering rework process.

#### TipSaver™ Workstand improves

**Tip Life** as well as operator ergonomics. The "Auto-Sleep" function reduces the power to the handpiece when it is placed in the Metcal TipSaver™ workstand. Reduction in power will substantially decrease tip oxidation, a major cause of reduced tip life.

**Ergonomic Handpieces.** The aluminium handpieces for soldering and rework provide a cooler, lighter-weight and more comfortable feel for the operator. And, the Metcal UltraFine and MicroFine handpieces feature a new generation of extremely fine-diameter cartridges in slimmer-profiled handles, ideal for work under the microscope.

## **ESD-safe and features incoming AC ground monitoring circuitry.** The

AC (mains) ground monitor detects power line ground failure, immediately alerting the operator and shutting down the system. Only after the power line ground has been restored can the MX-5200 be restarted and soldering operations can be resumed.

**Built-in power indication meter** with digital display and bar graph provides the operator with feedback on the status of the soldering operation. Whether using a large-mass rework tip for QFPs or a fine-point soldering tip, the power indication meter is a valuable resource for making consistent, acceptable solder joints.

**MX Soldering Systems** 

## Metcal's MX-500 Soldering and Rework System

The MX-500 system utilizes SmartHeat® Technology, where each cartridge is equipped with a self-regulating heater which 'senses' its own temperature and closely maintains its preset idle temperature for the life of the heater-tip. The tip temperature is determined by the inherent metallurgical properties of the heater; no external adjustment or equipment is required. The MX-500 features switchable dual port, 40W operation, and advanced features like a Net-Power Meter, programmable PowerSave mode, and Ground Fault Interrupt.

## **Solder Tip Cleaner**

Solder tips represent a significant part of the cost of ownership for a solder station.

Oxidation on the tip degrades performance by creating a barrier that decreases the thermal transfer of heat to the solder joint. This barrier slows performance and, if not corrected, will damage the tip. Proper tip care is essential to maximize the life of the tip.

Metcal's Solder Tip Cleaner removes oxidation and extends the life of the solder tip. By placing the tip into the opening, the tip cleaner senses the tip and automatically activates, saving the operator time. A splashguard prevents debris from escaping the collection area.

**HCT2-200 Systems** 

# HCT2-200 Digital Hot Air Pencil This digital handheld convection tool is ideally suited for light rework applications, which use smaller components

and integrated circuits. As component miniaturization continues (i.e. 01005 components)

the ergonomics of a pencil allow a user more freedom to access and rework components on the board without affecting adjacent parts. Larger handheld convection systems commonly reflow and dislodge adjacent components due to a higher minimum airflow. The HCT2-200's small nozzle sizes, precision control, and thermal power allow the operator to target only the desired component.

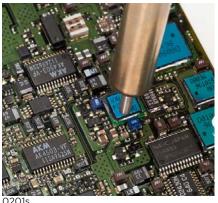

The HCT2-200 was developed for very small surfacemount component and package sizes (1210s and smaller) and low board densities. For denser PCBA's, applications with heavy copper planes, boards with more than four layers, or components larger than 50 mm<sup>2</sup>, use of a Metcal preheater (PCT-100 series) may be necessary.

# Why Fume Extraction?

Solder smoke is more than just an irritant. It can reduce worker productivity through a loss of concentration and fatigue. These and other health concerns, like occupational asthma, may be a result of exposure to solder fumes during the production process. As an employer, you are responsible for properly managing the health risks associated with solder fumes and take appropriate precautionary measures. Smoke absorbers and fume extractors are a simple way to manage the risk to employees and your organization.
